

Telephone Intercoms

Connecting people through technology.

- ▲ RDIM
- ▲ 6000D
- ▲ 6000R
- ▲ 6000 Mini

The Trigon Model 6000 intercom systems combined with our **NEW** RDIM maximizes the intercom's integration adaptability while minimizing its interaction with the telephone service.

 **TRIGON**[™]
ELECTRONICS, INC.

Transform your resident's phones into door intercoms utilizing the latest technology from Trigon.

RDIM

The RDIM (remote demarcation interface module) is designed for installation in the residence NID box between the telephone input and the residence phone network. The telephone input can be fiber to the residence, cable telephone, VOIP or copper from the riser closet. Any of these eliminate the hassle of cross connects in the telephone room.

- Interfaces to model 6000 Series
- Minimizes telephone service interaction
- Allows Call Waiting
- Includes Trigon's proprietary TA (telephone Assist circuitry)

6000D

The Model 6000D is a multi-channel Telco line interactive intercom system. It is a "call up/call down" intercom with proprietary "telephone assist" circuitry that automatically supports full system operation with or without standard telephone service.

- Eight simultaneous phone calls
- Works with DSL service
- Works with or without RDIM
- Intercom call blocking
- Fully programmable
- Optional Call Manager

6000R

The Model 6000R is designed for installations that require RDIMs at all residence locations. Since outside telephone service no longer runs through the Stack/Relay boards, they have been redesigned to handle 24 residences per board. This also allows the complete RJ71C block to be used for (24) resident pairs.

- Same features as 6000D
- Cost effective
- Call up/Call down
- Must be used with RDIMs

Mini 6000

The Mini 6000 is a single-channel Telco line interactive intercom system. It can be configured as a "call up only" or a "call up/call down" intercom. Its digital modular architecture allows vertical daisy chaining of relay modules to locate the RJ71Cs in the riser closet with only distributed processing connections floor to floor.

- Single channel operation
- Works with DSL service
- Works with or without RDIM
- Intercom call blocking fully programmable
- Optional Call Manager
